# WEATHERING THE WEATHER...

Meet Clyde
Weathering the weather is a website that makes light of the physical and mental sensations through an alligator named Clyde.
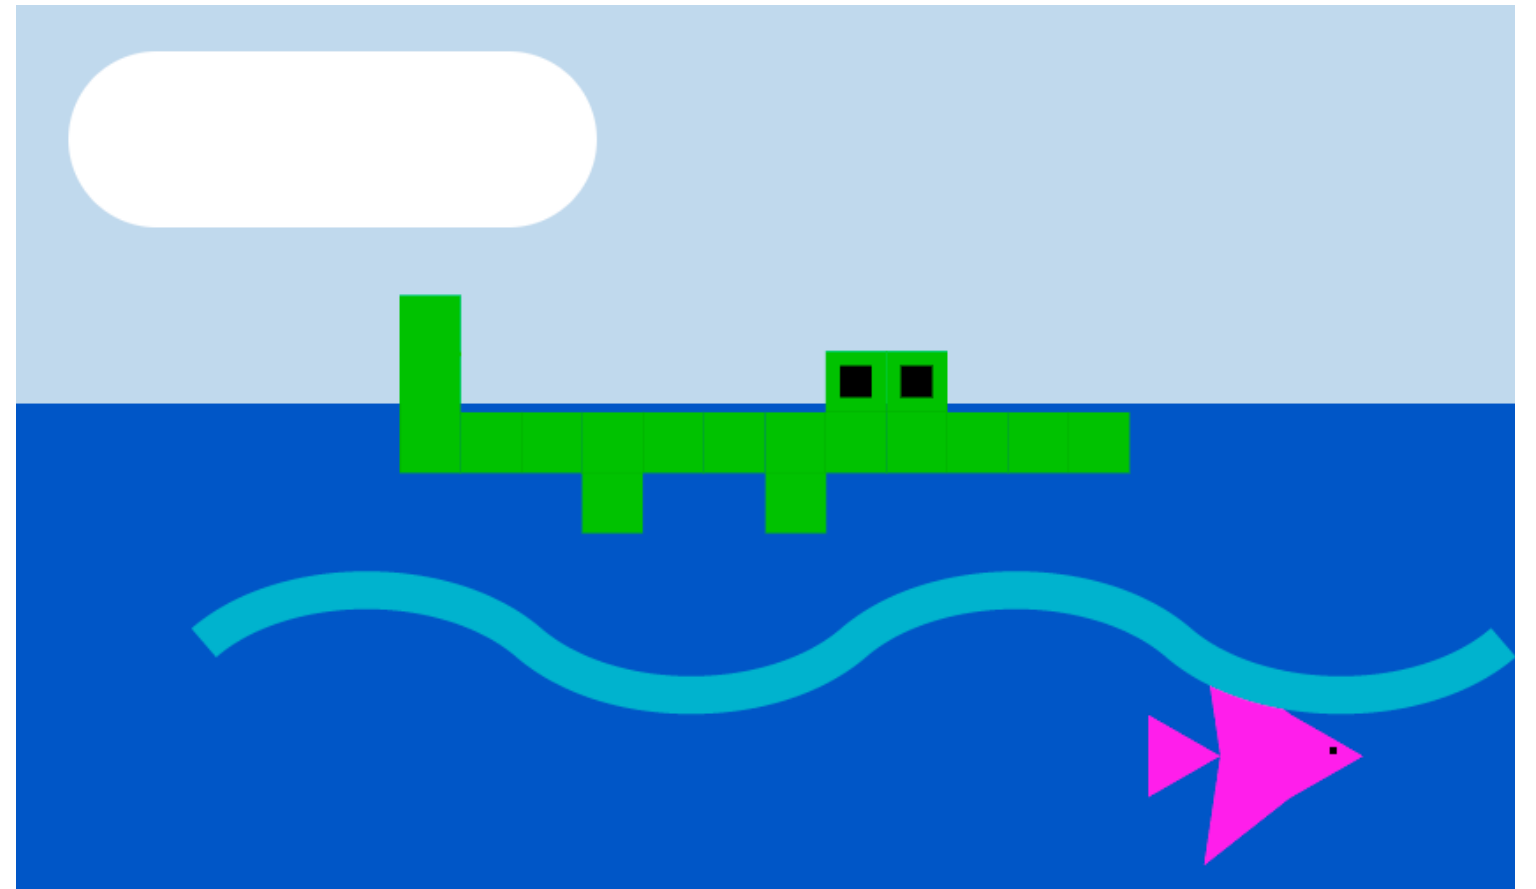

INSPIRATION

Got Game?

I've always been a big fan of video games. One of my goals as a kid was to create one. *Weathering The Weather* is inspired by Spyro the Dragon and Super Mario. I was also inspired by the user experience of Party Pooper by the Design and Production company called Animade.
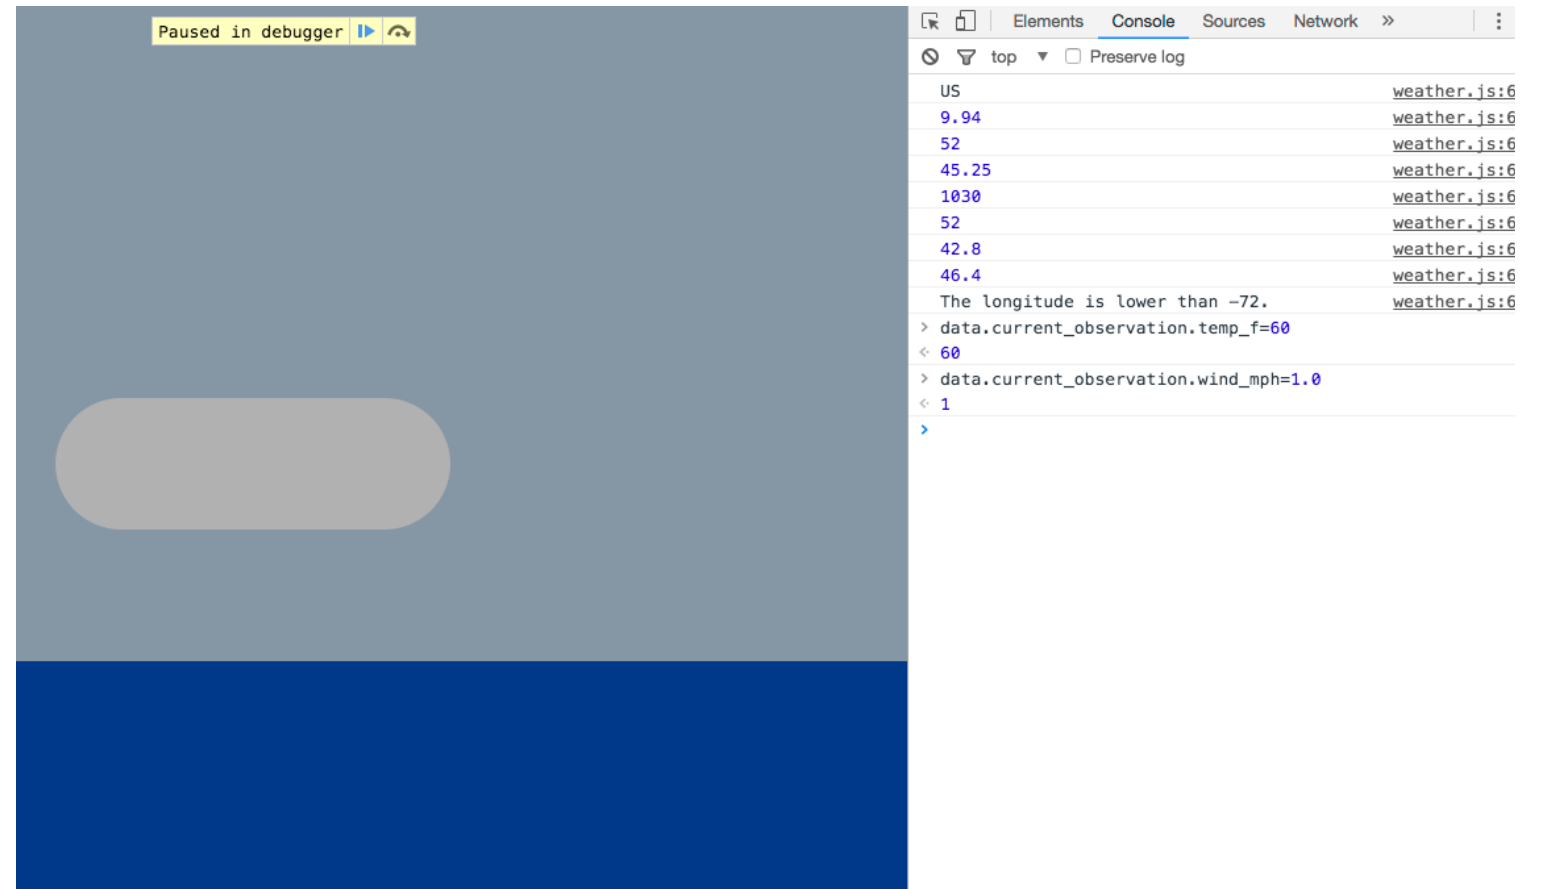

THE OBJECTIVE

Weather Feels
When the weather changes, Clyde and the other character's actions and appearance change. This project focuses on the main weather conditions. Such as temperature, rain and wind speed. Depending on the weather, things might disappear, move, change form and color.
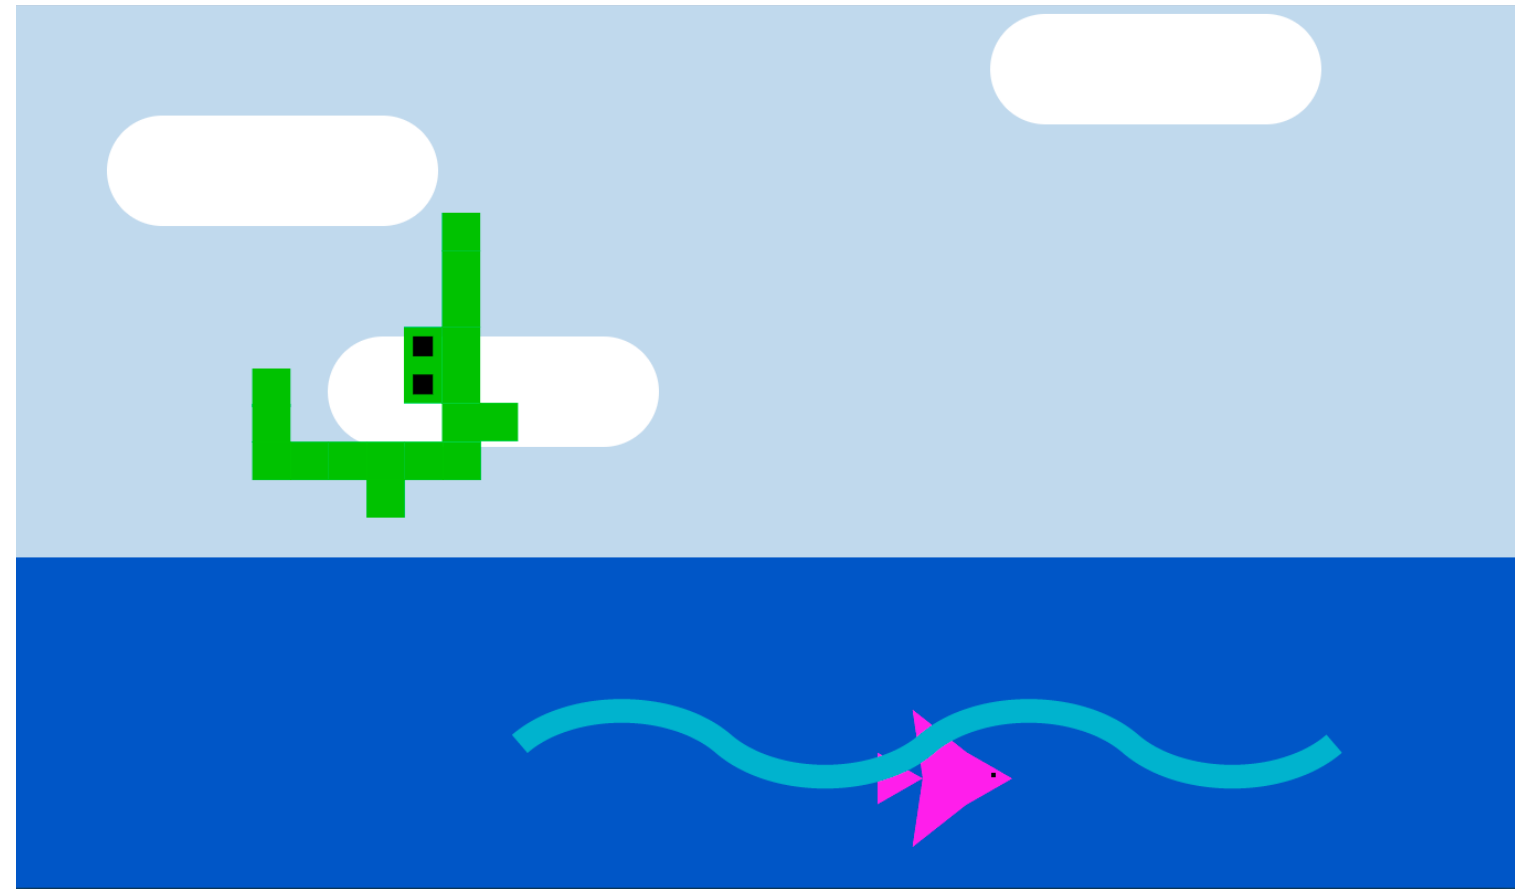

FUNCTIONALITY

Speaking Code

This website targets the weather information via Weather Underground through a JavaScript file. In this project we used a JavaScript built in tool called JSON to get the weather responses that we wanted to use.
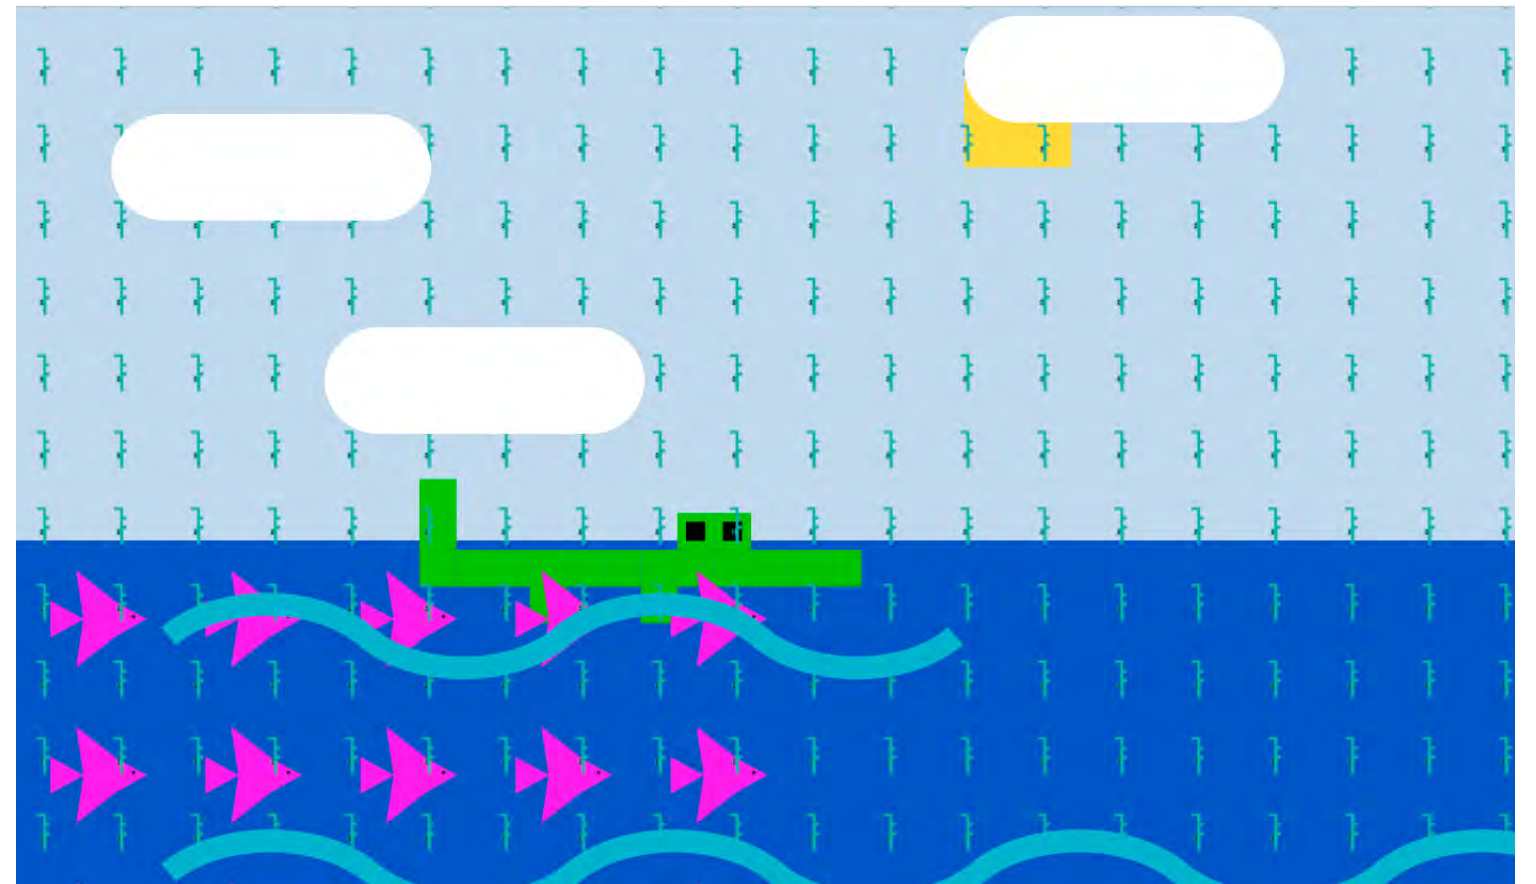

WALK-THROUGH

Wild is the Wind
When it's windy Clyde flies through the air and bends in half, the clouds move backwards and the water ripples.
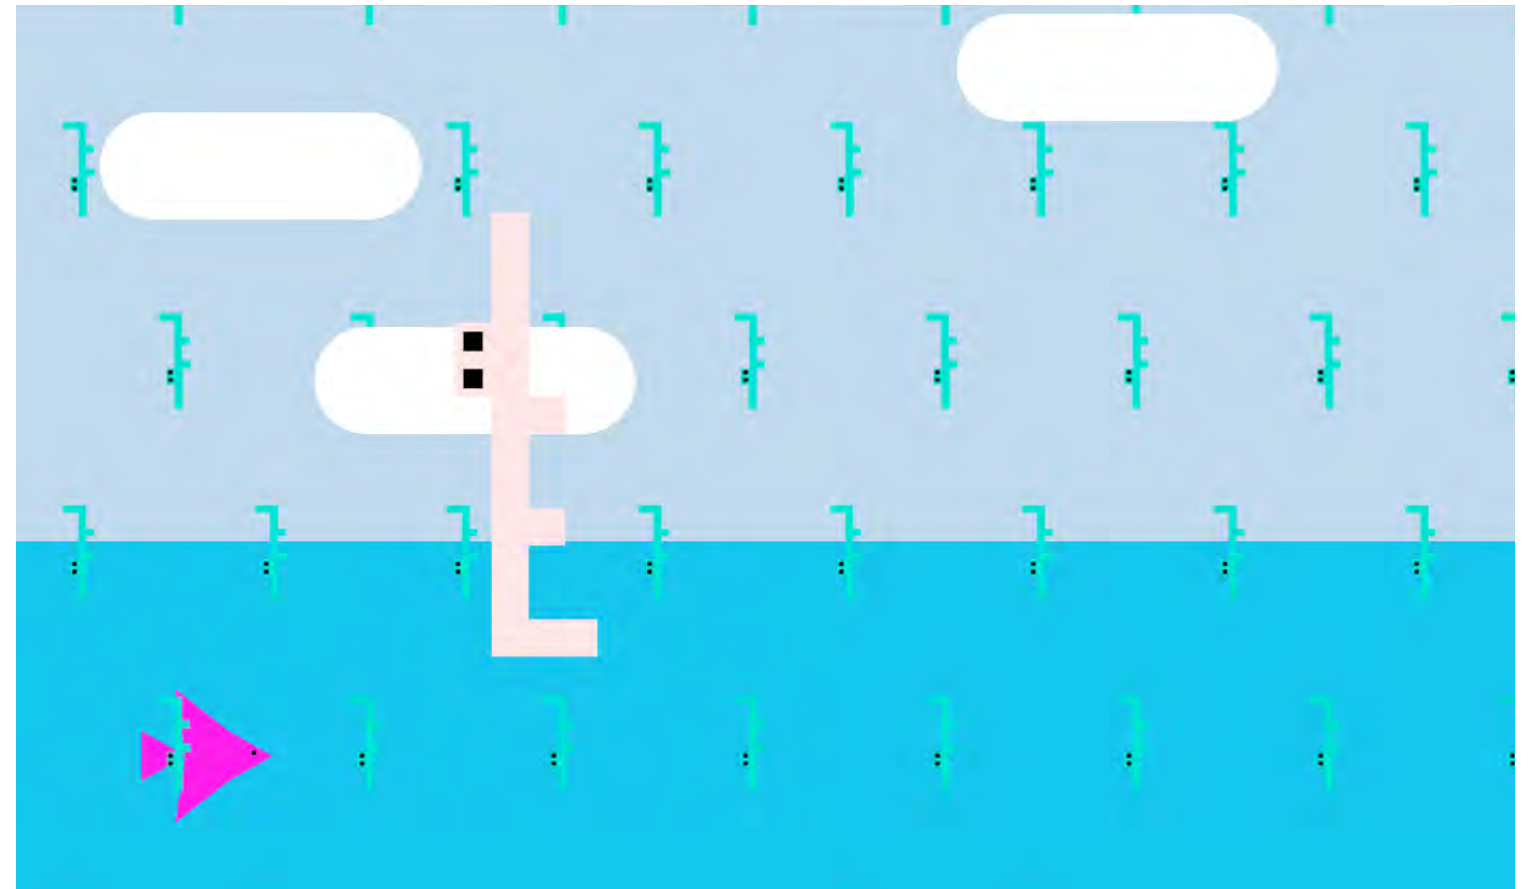

WALK-THROUGH

It's Raining Cats and Alligators?
It's literally raining alligators when it rains. Also, a school of fish move horizontally across the page.
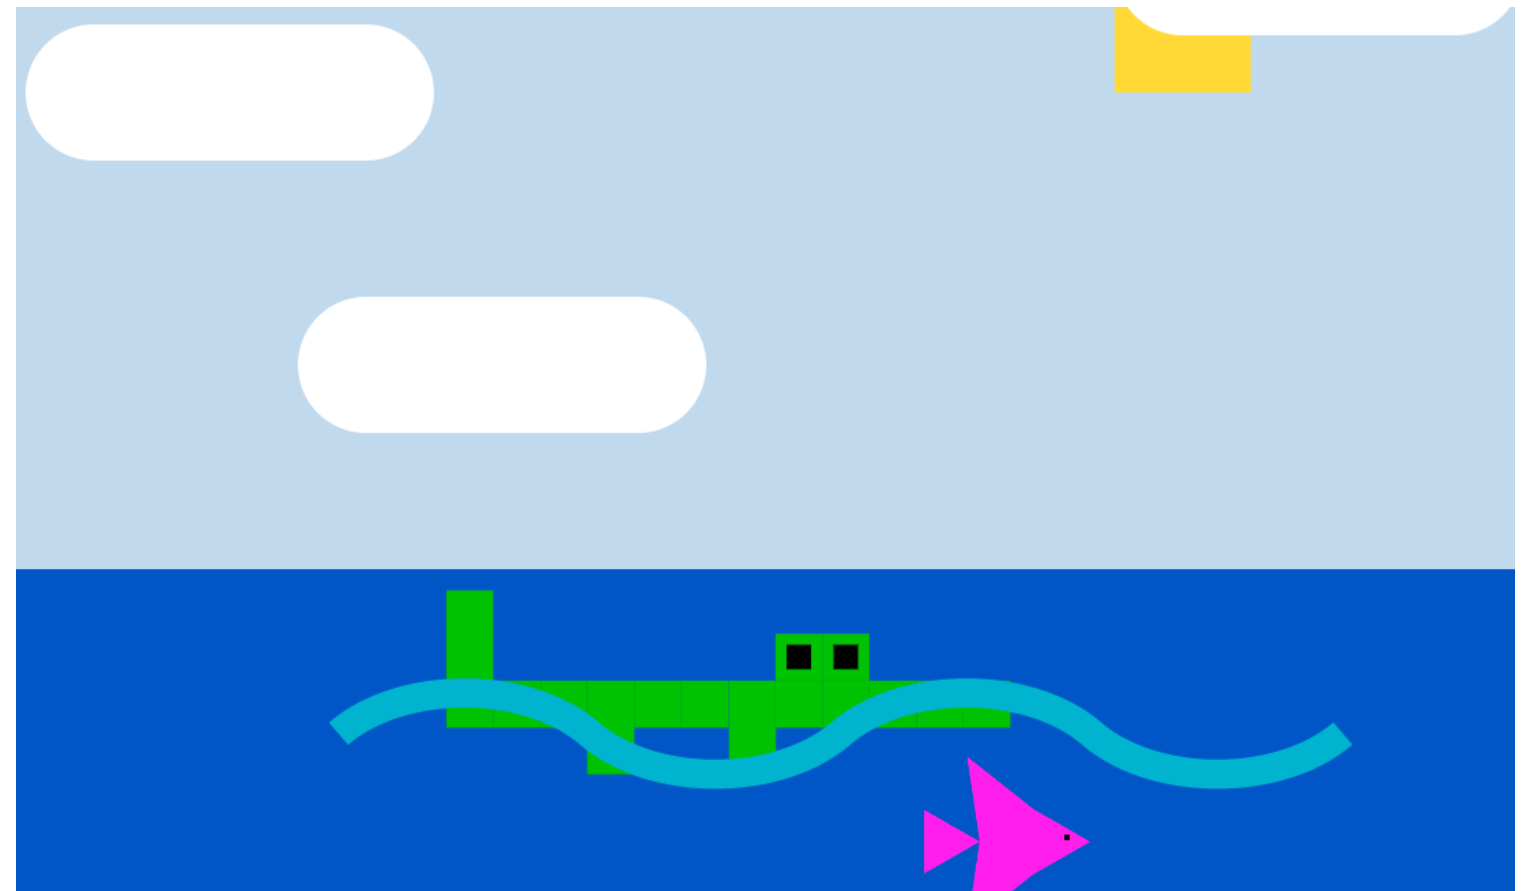

WALK-THROUGH

Dancing in the Street
When it's less than 50 degrees Clyde dances to stay warm. It begins to snow alligators and the fish is frozen in place.
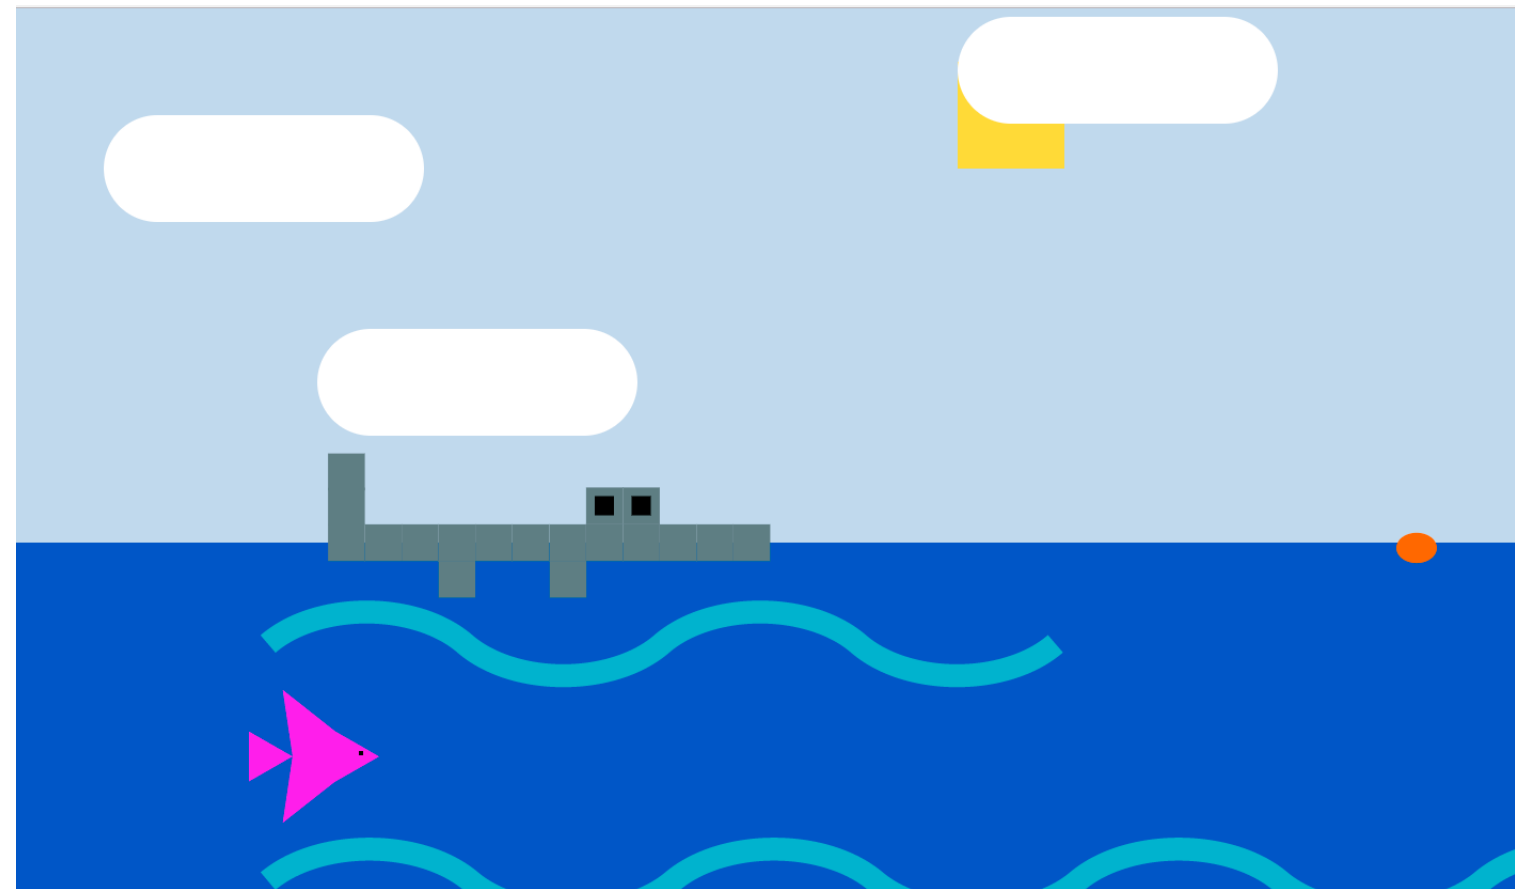

WALK-THROUGH

Ideal Weather
When the temperature is between 50 and 75 degrees Clyde is in his optimal state. One of his favorite songs by Ludacris plays and he is happily swimming.

WALK-THROUGH

Not a Happy Camper
Clyde does not handle hot environments very well. When the temperature rises to 75 degrees or above, Clyde's attitude and appearance change.
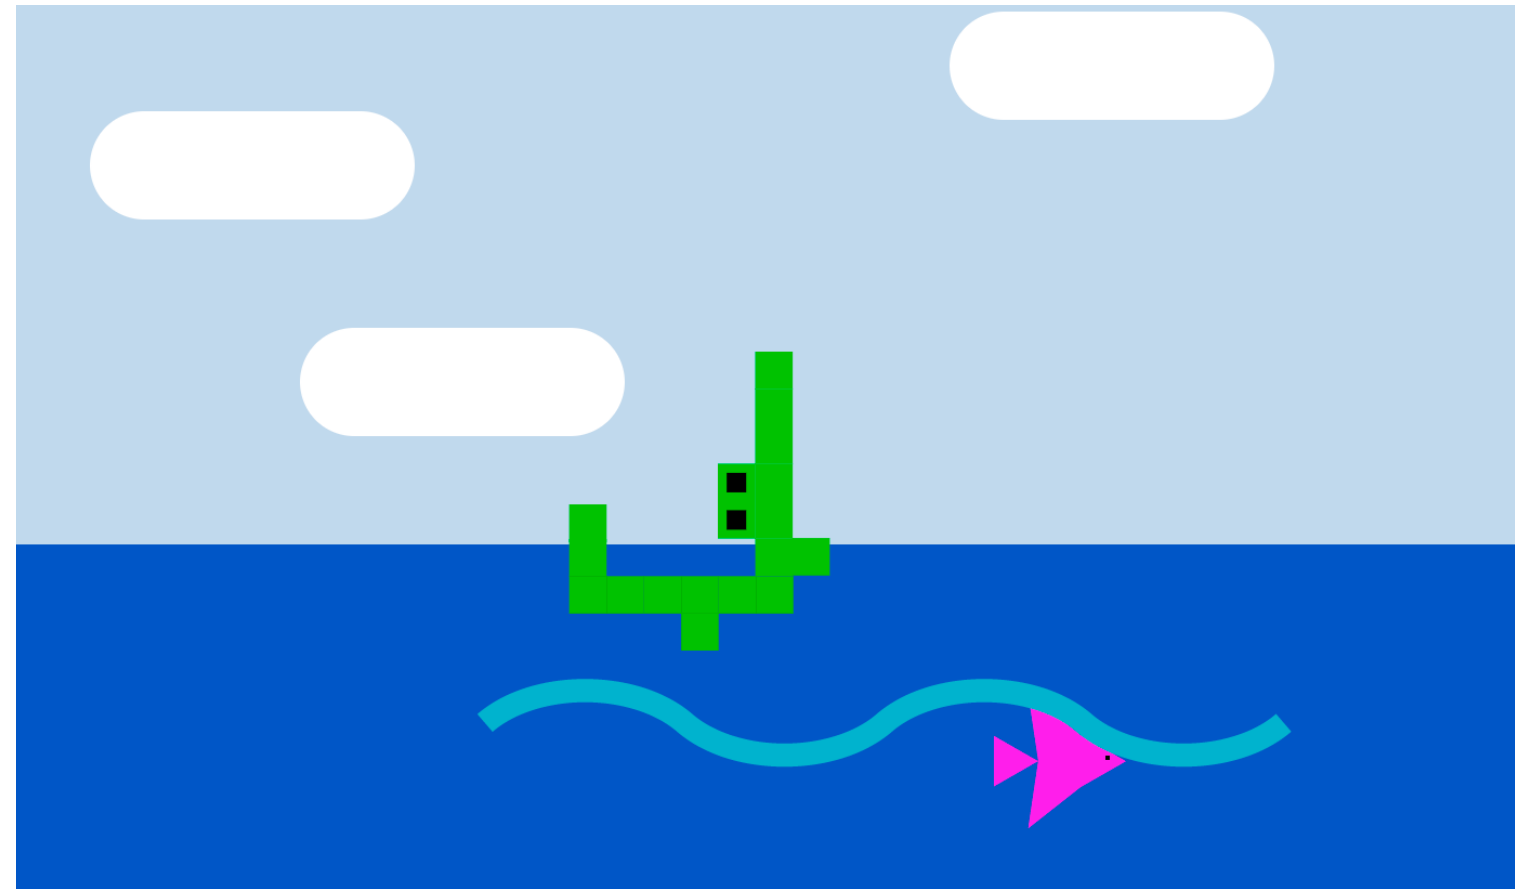

USER EXPERIENCE

Website Simulation
These are videos of the user experience.
